

After consulting 5 people I made the following conclusions and changes.

General:

- In the navbar it now shows on which page you are.
- Links in the footer are now clickable and will send the user to the correspondent webpage.
- Made sure that the user can click all buttons and they work(not the cards though)

Index.html:

- The website is a little much of the same. In terms of layout. So instead of introductions to the different pages being underneath each other they are now next to each other. It makes of a clearer divide of content.
- Added buttons to the introductions as well to make it easier to navigate to the different pages. Added a contact us button to the top. It enables the user to move to every page with a button instead of using the navbar (that one still works too).

Recepies.html:

- The recipe page needed a little work as it did not serve its purpose that well. It now includes a better title and under title reflective of the content.
- Added a slide show of pictures to give the page a bit of flair.
- Before the list of dishes there is now a short explanation of why the actual recipes are not available (from a marketing perspective it would remove the need of buying the book).
- Also made it so that when viewing the recipes on a phone you can see all the recipes stacked underneath each other.

Jamesmayweb.html

- This page has a little change made to the layout. To make the side more appealing the text and picture list is switched around on the second paragraph.
- This page also is where the yellow accents come from. It has big pictures with the signature yellow colour of the cookbook. Code: FFC107

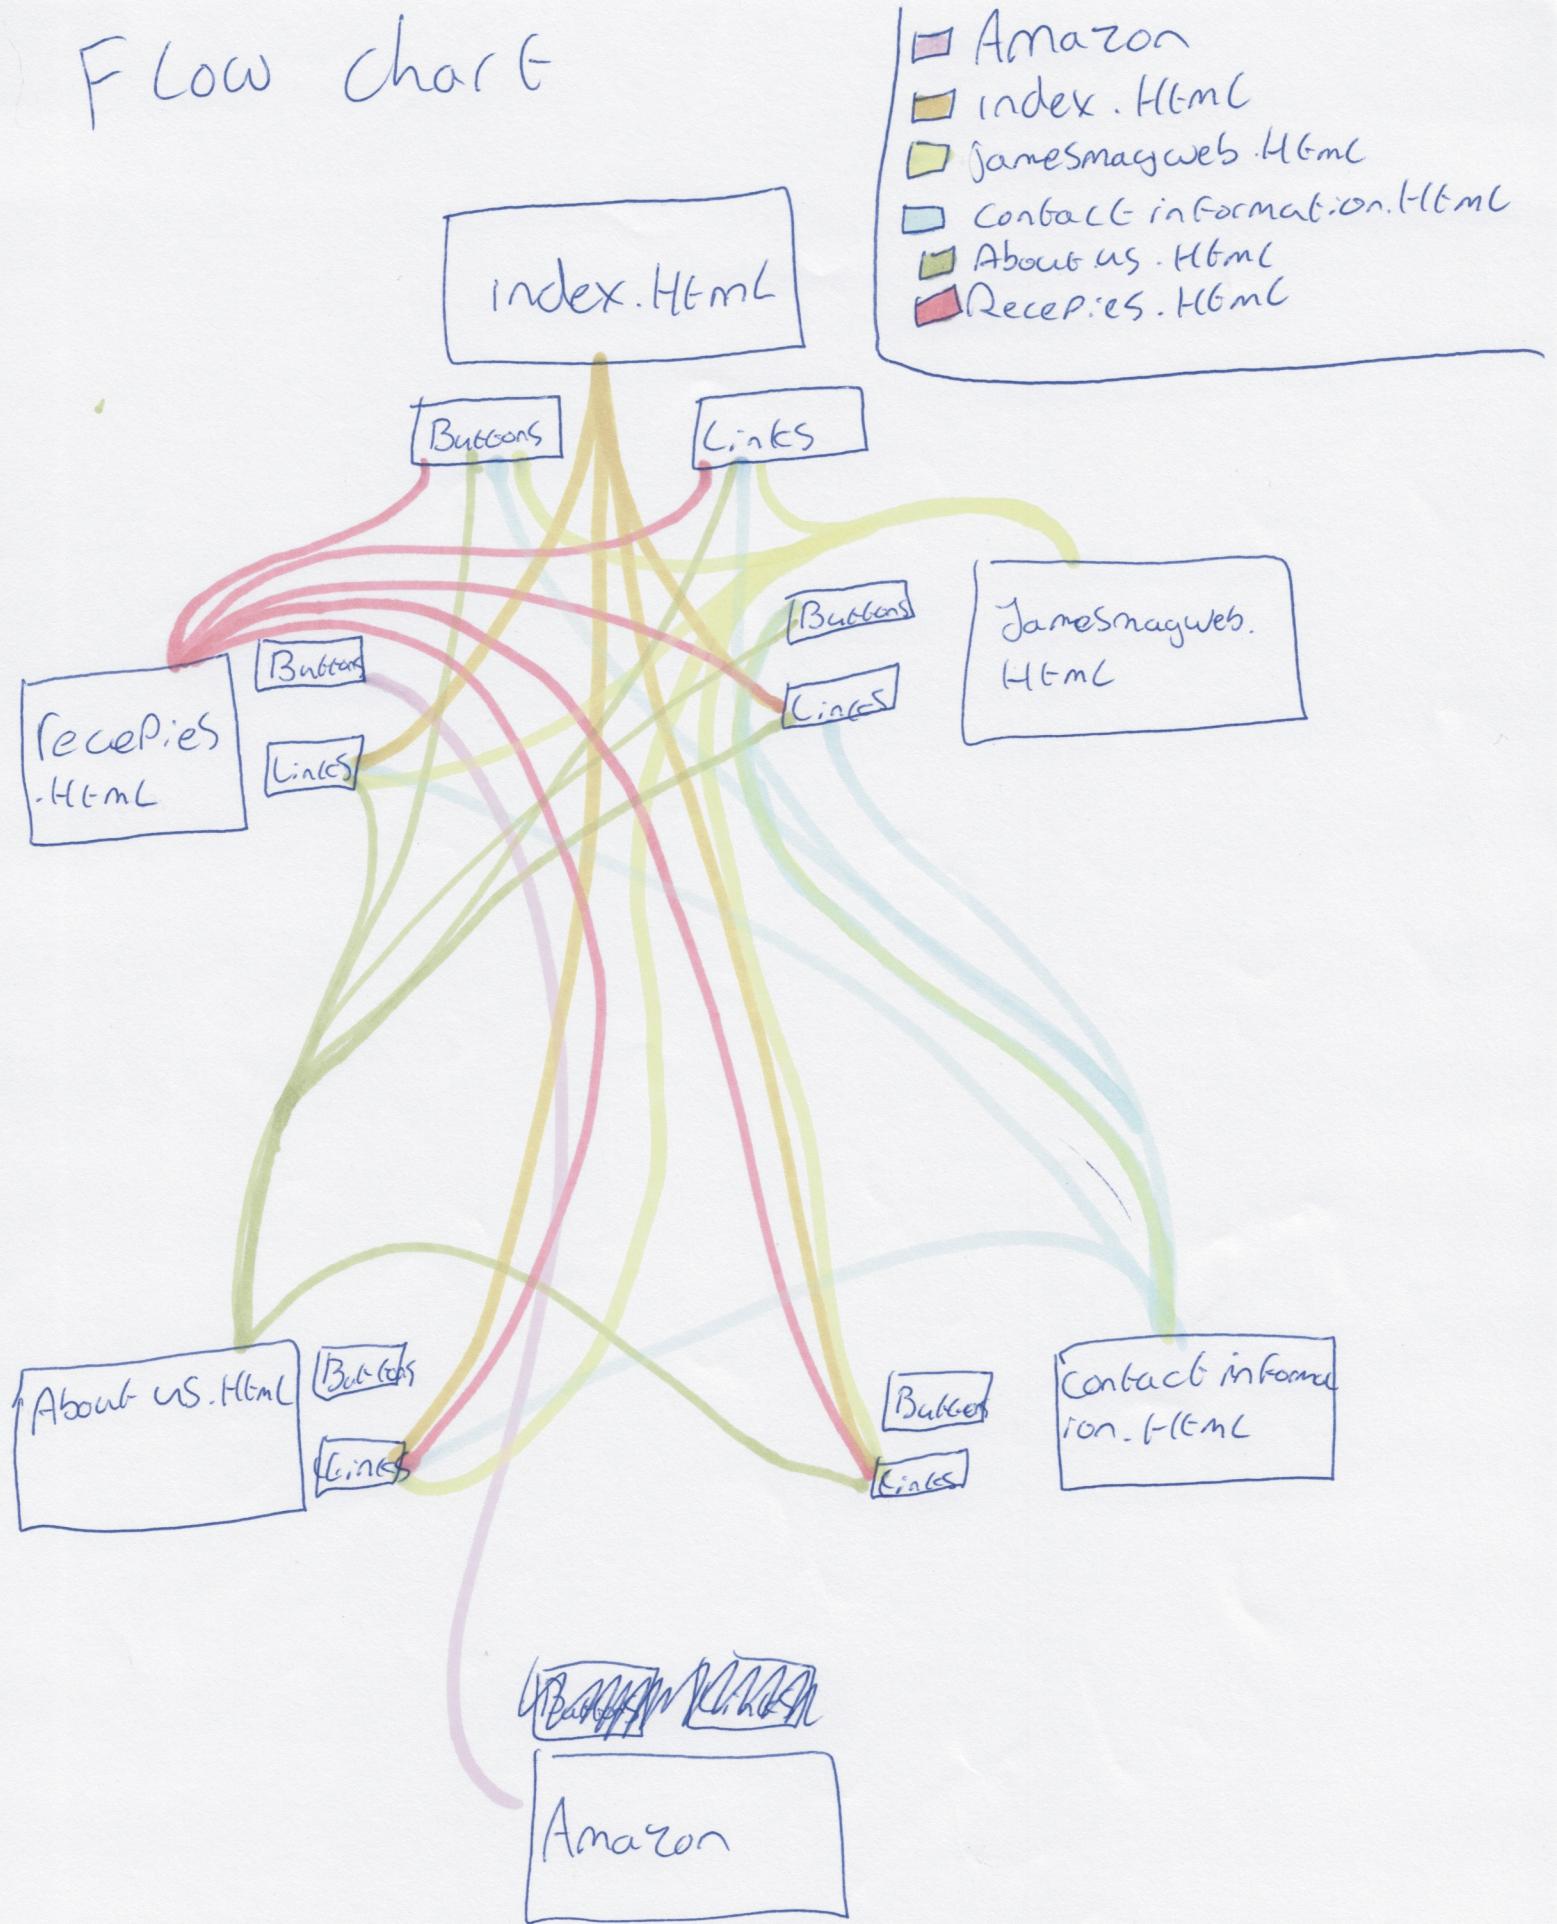

Aboutus.html

- the about us page was extended to also include the team members. The feedback stated that just talking about the goal and company values lacked a face to familiarise the consumer with who the company really was.

Concactinformation.html

- a small change was made to the contact page. An address section was added so the consumer could come in contact with themselves in addition to being able to leave a message and email address.
